Profile

Accomplished Software Engineering Manager with 17 years of experience in driving e-commerce and IT operations, consistently delivering high-quality solutions that enhance business performance. Expertise in leading cross-functional teams and managing complex projects with people oriented collaboration methodology , ensures alignment with strategic goals while maintaining budgetary constraints. Proficient in modern technologies and methodologies, including Java and Event-Driven Architecture, fostering innovation and efficiency. A strong advocate for team development and stakeholder engagement, committed to cultivating a collaborative environment that empowers talent and accelerates digital transformation initiatives. Ready to leverage a wealth of knowledge to propel organizational success in a dynamic e-commerce landscape. A leader who believes in bottom up approach and team autonomy instead of micro management and works with a mindset of creating more leaders.

Employment History

Software Engineering Manager, Lyreco, Amsterdam

JAN 2022

NextGen project is the ambitious program of Lyreco group to create one E Commerce solution from scratch based on **Event Sourcing** and **CQRS** pattern to replace the 3 platforms being used and cater to all regions and customers from it. Apart from Software Engineering Manager role I am also taking the responsibility of **Stream Lead** of Engineering Stream for NextGen Project.

Tech Stack : Java 21, Spring Framework, Kafka, NextJS, MongoDB,Kubernetes.

Responsibilities :

- Co-define program & platform **road map** with core leadership team
- Identify conflicts between program and platform priorities, identify options & impact and consolidate recommendations
- Technical coaching and talent development
- Platform reliability and engineering excellence
- Driving reliability, quality, and performance
- Leading 5 engineering squads of 55 engineers in total.
- Scaled Agile delivery
- **Vendor management**
- **Stakeholder management**
- Identify area of improvements, options & propose recommendations to improve efficiency and agility
- **Resource Planning**. and managing team of 40+ members located in 3 different locations
- Ensure that program deliverables meet quality standards and are delivered on **time and within budget**
- Highlight, track & propose resolution plan for debt against Implementation standards & guidelines
- Management of E com development stream issues, risks, dependencies, blockers (Reporting, tracking, updating and fixing)
- Define software development principles and practices
- Managing **budget** for Engineering stream.
- Identify technology **KPIs**
- Cross Team **conflict resolutions**
- **Recruitment** and on boarding of top-tier engineering talent, ensuring a high-performing and diverse team.
- **Regular performance reviews**, mentorship programs, and skill development initiatives for team members.

- People Management
- Guiding squads
- Ownership of platform delivery
- Coaching team leads
- Incident management
- DevSecOps leadership

Achievements:

- Launched the 5 pilot countries within time and budget
- Delivered platform with expected performance.
- Implemented completely new tech stack.
- Handled the change management for internal developers from monolith to the EDA based platform

Intershop Practice Manager, Staples, Amsterdam

JUL 2020 — DEC 2021

- Led a team of IT professionals in the planning, implementation, and maintenance of the company's E Commerce domain
- **Stakeholder management**
- **Vendor Management**
- **Managed development team** responsible for developing and managing webshops for 6 countries.
- Managed B2B platform for BENLUX and D2C platforms for Norway, Sweden and Denmark
- Planned and performed performance enhancements of the platform leading to less OpEx.
- **Dev Capacity management** and forecast as per product roadmap
- **Hiring the required talen**t for the team
- Handling the **performance reviews** of the team and setting up the goals inline with the company goals and product roadmap.
- Developed a plan to remove vendor dependency and move most of the things in house and executed it leading to cost saving and higher quality of work.
